

Irrigation Services

Installing an irrigation system that provides adequate watering during off peak hours and gives you the freedom to enjoy your landscape without the hassle of hand watering. Hand watering or watering with sprinklers have a potential for excess water and therefore waste a valuable resource. Our irrigation specialists will install your home or commercial irrigation system in a timely fashion and provide a virtually no waste watering system.

Benefits of an *Advanced Property Systems* install:

- Irrigation provides efficiency meaning no more over or under watering...saving you energy, time and money!
- No more dragging hoses around your property because our systems are connected to a Controller which will allow for a 7 day scheduled water time.
- We install a Rain Sensor with your system or pre-existing systems, which automatically measures rainfall and turns off your irrigation system if a certain amount of rain has fallen. This ensures no over watering will take place and will save you money on your water bill.
- A well designed system ensures your entire landscape is covered and will keep you from having dry spots.
- Our systems provide zone specification so you can water your flowers or bed zones at various times of the day.
- We provide design, installation and service of all major brands, including Irritrol, Hunter, Rain Bird and TORO.
- In addition, we provide key maintenance services at specific intervals to keep your irrigation system running at optimal output. These interval maintenance services include Spring Turn On, In Season Check-up and System Weatherization as well as prompt emergency service available as necessary.

We install our systems using a vibratory plow. This machine enables us to install a system in established sod with minimal or no grow back. And when necessary our machinery can bore under driveways, walkways and roads to eliminate unnecessary pipe.
